Figure 1 reproduction

This directory contains the plotting script, coordinate audit and cached basemap data for Figure 1, which maps nine independently verified local occurrence locations.

From this directory, install the requirements in source/requirements_figures.txt, then run:

```
PYTHONDONTWRITEBYTECODE=1 MPLBACKEND=Agg python source/create_figure_1_locator_map.py
```

The generated exports are written in this directory. Palatino is needed to reproduce the original typography exactly. The figure's source-zone symbols are representative points rather than geological boundaries; occurrence locations do not establish the origin or date of individual finds.
